

Roster - To Be Certified Workflow

The Application workflow is a dependency for the Roster “To Be Certified” workflow. When all workflows (application registration, awarding) and tasks (e.g., school acceptance, award acceptance) are complete for a household's application, the student(s) is ready to transition into a school roster.

The “To Be. Certified” roster domain model shows domain items and relationships - student is enrolled at the specified school.

A potential flow for the workflow orchestration with AZure.
